Beginning with the background and very nature of probability theory, the book then proceeds through sample spaces, combinatorial analysis, fluctuations in coin tossing and random walks, the combination of events, types of distributions,

Its difficulty is appropriate for a 5000-level class. It turns out that probability, as a subject, is very closely tied to real analysis, what you would study in 5210 (I have not taken that class). I would anticipate that 5210 is the harder of the two.
